Devvrat Patel

Iselin, NJ | (732) 429-3860 | DevvTheDev.com | devvrat.patel@outlook.com | linkedin.com/in/devvrat-patel

Summary

Software Engineer II with 5+ years building high-scale distributed systems (2MM+ subscribers, **$10MM+ annualized revenue**). Owns features end-to-end from architecture through production, with a growing focus on **agentic AI tooling**–building custom AI agents, skills, and MCP integrations to automate engineering and operational workflows.

Experience

Amazon New York, NY
Software Engineer II *May 2022 – Present*

Technical Leadership & System Design

- Architected and led the Interstitial Upsell system across 7+ microservices, increasing subscriber acquisition from 11K to 181K/month (**+1,545%**) with a 10% conversion rate.
- Designed end-to-end architecture for Enhanced Grocery Subscription Landing Page, integrating dynamic frameworks and coordinating 3 engineering teams to enable seamless content delivery.
- Led architecture redesign of Amazon Physical Location Finder (APLF) after inheriting undocumented codebase, establishing AWS infrastructure, auth integration, and monitoring systems.

Execution & Business Impact

- Drove FTC Double Opt-In compliance project, creating system design and leading 2 engineers through implementation while serving as away-team contributor to maintain legal deadlines.
- Delivered Store Finder feature driving **$10.7MM combined annualized revenue** impact across Pickup and Delivery channels for Non-Prime customers.
- Automated Paid Search ad campaign workflow for US/UK markets using AWS and Google Ads API, reducing manual team effort by 80% (16+ hours/month).
- Mentored interns through full project lifecycles from high-level design through stakeholder approvals, resulting in successful demo delivery and full-time hiring conversions.

AI & Automation

- Built custom AI agents and skills encoding team knowledge to automate on-call ticket handling; a first-pass investigation agent surfaces relevant logs and context upfront, **cutting investigation time 50%**, and drove tuning of transient alarms to eliminate recurring tickets.
- Automated recurring engineering workflows with scheduled agent jobs (email digests, 1:1 status summaries) and authored custom MCP servers/tools to embed AI across daily processes.
- Built a Slack-integrated AI agent that tracks code changes, design docs, wikis, and email/Slack threads, letting PMs and stakeholders self-serve real-time project status and progress questions on demand.

Pacific Gas and Electric Company Remote
Software Engineer *Aug 2020 – Apr 2022*

- Developed ESRI GIS mapping applications using React.js and Bootstrap for first responder spatial data visualization, ensuring 99.9% uptime for critical location services.
- Integrated Google Maps and Esri APIs for real-time geographic data representation and spatial analysis.
- Designed a reusable UI component library using OOP principles, ensuring consistency across utility-scale mapping applications and reducing future development time by 30%.

Technical Skills

Languages/Frameworks: Java, Python, JavaScript, TypeScript, SQL; Spring Boot, React.js, Hibernate, J2EE
Cloud & Infrastructure: AWS (S3, DynamoDB, Lambda, CloudWatch, SQS, SNS), HEX AWS, Cloud Auth
AI & Automation: Agentic AI Tooling, MCP (Model Context Protocol) Servers, LLM Integration, Amazon Kiro, Claude Code, Codex, Prompt Engineering, Workflow Automation
Architecture & Tools: Microservices, System Design, Distributed Systems, Docker, Git, CI/CD, Weblab A/B Testing
Practices: Event-Driven Design, A/B Testing, Agile/Scrum, Technical Documentation, Unit/Integration Testing

Education

Rutgers University New Brunswick, NJ
B.E. Computer Engineering and Computer Science *Sept 2016 – May 2020*
